Intra-Cellular Therapies to Announce 2013 Fourth Quarter And Full Year Financial Results and to Host Conference Call on Tuesday, March 25, at 4:30 pm Eastern Time

NEW YORK, NY, March 18, 2014 /PR Newswire / — Intra-Cellular Therapies, Inc. (NASDAQ: ITCI), a biopharmaceutical company focused on the development of therapeutics for central nervous system (CNS) disorders, today announced that it will host a conference call and a live Internet webcast at 4:30 p.m. Eastern Time on Tuesday March 25, 2014 to discuss the financial results for the fourth quarter and year ended December 31, 2013.

To access the live conference call via phone, dial 1-877-375-1350. International callers may access the live call by dialing 1-315-625-3229. The conference ID number for the live call is 15579533. A telephone replay will be available approximately two hours following the conclusion of the conference call and may be accessed via phone at 1-855-859-2056 for domestic callers, or 1-404-537-3406 for international callers. The conference ID number for the replay is 15579533.

The live and archived webcast of the company's presentations can be accessed under "Events & Presentations" in the Investor Relations section of the Company's website at www.intracellulartherapies.com. Please log in approximately 5-10 minutes prior to the event to register and to download and install any necessary software. Both the telephone and the webcast replay will be available on the website until April 1, 2014.

About Intra-Cellular Therapies

Intra-Cellular Therapies (the "Company") is developing novel drugs for the treatment of neuropsychiatric and neurodegenerative disease and other disorders of the central nervous system ("CNS"). The Company is developing its lead drug candidate, ITI-007, for the treatment of schizophrenia, behavioral disturbances in dementia, bipolar disorder and other neuropsychiatric and neurological disorders. In December 2013, the Company announced positive topline results from the Company's randomized, placebo- and active-controlled Phase II clinical trial of ITI-007 in patients with acutely exacerbated schizophrenia. This study showed a statistically significant improvement in symptoms associated with schizophrenia at the 60 mg dose on the trial's pre-specified primary endpoint and a favorable safety profile. The Company is also utilizing its phosphodiesterase (PDE) platform and other proprietary chemistry platforms to develop drugs for the treatment of cognitive deficits in schizophrenia and other CNS disorders. The Company has partnered its lead PDE-1 compound, ITI-214, and backups from this platform with the Takeda Pharmaceutical Company. ITI-214 has finished the first Phase 1 clinical trial and is now in subsequent Phase 1 trials. The Company is also developing inhibitors against additional targets for CNS indications such as Alzheimer's disease, Parkinson's disease and depression and non-CNS indications such as cardiovascular disease.
